

Omkar Mishra

Full-Stack Web Engineer

+91-9993226333 | omkarmishra591@gmail.com | LinkedIn | GitHub | Portfolio | Leetcode

Education

Christian College of Engineering and Technology

Sept 2022 – Present

B.Tech in Computer Science & Engineering

- CPI: 7.8/10
- **Coursework:** Data Structures and Algorithms, DBMS, OOPs, Operating Systems, Computer Network.

Experience

Software Developer (Intern) - Finvision

Feb 2026 – Present [link](#)

- Built and enhanced a CRM + LMS web application.
- Developed REST APIs for trading, user management, and admin operations.
- Assisted in production deployment and DevOps workflows on VPS infrastructure using PM2, Nginx, and GitHub Actions.
- Worked within an Operations team structure and reported directly to the Head of Operations during the internship period.

VT on Python AI - Techonet Private Limited

May 2025 – June 2025 [link](#)

- Gained strong foundation in Python programming, covering data types, control structures, functions, and OOPs principles.
- Practiced logical programming by solving real-world problems, implementing algorithms, and debugging code efficiently.

Projects

NalmiFX (A forex/crypto trading platform)

[link](#)

- A forex/crypto trading platform with features include live trading, copy trading, prop trading, an IB (Introducing Broker) affiliate system, and a multi-tenant admin panel.
- Built and integrated real-time market data features using Socket.IO and WebSocket-based price feeds, enabling live updates for 100+ forex, crypto, and commodity symbols.
- Tools Used: React.js, Node.js, MongoDB, Github Actions CI/CD, Nginx.

AchievR (Full-stack Web app)

[link](#)

- A full-stack web app for students to submit co-curricular achievements, get them faculty-verified, and generate tamper-proof digital certificates with QR-based verification.
- Developed a certificate service using pdf-lib and QRCode to generate professional certificates, send them via email, and expose verification endpoints consumed by a dedicated Verify Certificate page.

Emotion-Based Music Recommendation

[link](#)

- A Python and Streamlit-based web application that detects a user's real-time emotion from facial expressions and text sentiment using computer vision and ML models, then recommends mood-aligned songs by mapping emotions to curated playlists via YouTube APIs.
- Tools Used : Streamlit, Numpy, Keras Model, AV library

Technical Skills

- **Languages:** JavaScript, Typescript, Python, C++
- **Database:** SQL (MySQL), NoSQL (MongoDB)
- **Frameworks:** React.js, Next.js, Django, Node.js, Express.js, Bootstrap, Tailwind CSS
- **DevOps & Deployment:** Kubernetes, Docker, Vercel, Render
- **Developer Tools:** Git, GitHub, VS Code, Postman, MongoDB Compass, Figma, RESTful APIs

Achievements

- **Grand Finalist – HackOMania (2025):** Led 4-member team in 24-hour National-Level Hackathon | Competed among 180+ teams and advanced to grand finals.
- **IC-ISHVA 2025:** Authored a research paper titled “Comprehensive Survey on Gradient Descent and Backpropagation Algorithms” presented at the IC-ISHVA 2025 International Conference.
- **The Forge Hackathon, IIT Bhilai (2026):** Runner-Up
